

# ESG Clearing House

A common solution for exchanging all standardized sustainability metrics

## The Challenge

Sustainability data will be on equal footing with financial data with regard to its use, distribution and reliability. There will be an increasing focus and demand for the **exchange of standardized, reliable, sustainability data** throughout the supply chain, from companies to financial products. There is an increase in awareness and understanding, but a lack of a **common ESG data exchange solution**.

## The Business Case

The market needs an exchange solution that can meet growing demand for standardized, auditable, automated and secure ESG data. With their participation, companies become part of the ESG Clearing House data exchange community and **accelerate the use of standards to improve ESG data quality and increase efficiency**.

## The Solution

The ESG Clearing House is a global, non-profit solution. It enables all participants, including corporations, suppliers and capital providers, to exchange sustainability data through a **common platform, in a standardized format** to reliably and securely exchange tens of millions of **sustainability data transactions** on a monthly basis.

## Value proposition

<b>Companies:</b>	Provide and collect ESG data in a standardized format and share the benefits and costs of this data exchange platform among users in a non-profit model
<b>Suppliers:</b>	Provide customers with the relevant ESG data on a peer-to-peer basis, gaining competitive advantages
<b>Investors:</b>	Standardized ESG data transparency on investments directly from companies
<b>Banks:</b>	Securely request ESG data on your loanbook using common taxonomy standards
<b>Solution Partners:</b>	Visma Connect's data exchange solutions use battle-proven technology running billions of data transactions annually and have never lost a single message since its inception over 15 years ago

# ESG Clearing House Principles

The ESG Clearing House adheres to the principles below as a shared foundation for its work:

- Common, inclusive and neutral
- Open partnership, shared benefits and costs
- Sharing fees between preparers and users
- Broad oversight body governing the ESG Clearing House (including preparers, user groups, standard setters and supervisory entities)
- Public accountability and transparency
- Entrepreneurial, hands-on and agile approach
- Data preparers will always own their own data: the ESG Clearing House will never sell data and is not responsible for its contents
